
Complexity

Fazlul Huq 12/11/2005 (06/1012005)

*From bang of the fire-ball
At time zero of the universe!
About fifteen billion years ago.*

*Inspired and ever deemed to be complex,
As particles fused and aggregates queued.*

*So has life begun and continues to evolve,
As all march towards the Final Abode,
Willingly on a straight path or by force.*

*Do you not ponder about His intent and design?
In order to comprehend the Signs within and beyond.*

*As goodness is that what provides lift and force,
And evil takes you back or makes you astray,
Do you not feel the urge to tune and resonate?
To bind in justice, compassion and love,
And fragment not in greed and hatred.*

*So let us reject evil and embrace goodness,
And as always rejoice in His Glory and Praise.*
